Office Action Summary

Art Unit: 2818

1. The Preliminary Amendment filed by Applicants on February 19, 199 have been received.
2. The Information Disclosure Statement submitted by Applicants on March 22, 1999 have been received and fully considered.

3. Claims 1-150 have been canceled.

New claims 151-188 have been added.

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 151-157, 161-163, 165, 168-173, 177-179, 181 are rejected under 35

U.S.C. 102(b) as being anticipated by Jackson (U.S. Patent No. 4,315,308).

Jackson discloses in figure 1 a microprocessor chip [200] is attached to bus interface unit [201] which provides for interface control of data transfers between the processor [200] and other units such as memories, I/O devices, or other processors in the system (column 4, lines 17-21).

Jackson teaches that timing synchronization between the units shown in Figure 1 is provided by a clock signal [CLKA] which is connected to each of the units. A read or write operation takes place over several cycles (column 5, lines 36-39). The processor [200] may issue requests for one, two, four, six, eight, ten, sixteen or twenty bytes of data to be transferred. This length information is part of a control field which was transmitted during the first cycle of the transaction (column 6, lines 4-8).

Art Unit: 2818

Jackson show in figure 3 a table setting forth the control specifications for the address, control, and data bytes which use binary representation.

6. Claims 158-160, 164, 166-167, 174-176, 182-183 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Harada et al. is cited to show a PC card system having a register which store the sector specification value, the address data and so on (column 7, lines 25-29).

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tan T. Nguyen whose telephone number is (703) 308-1298. The examiner can normally be reached on Monday to Friday from 08:00 AM to 04:00 PM.
